

LETTER OF RECOMMENDATION

David Duque

Intern · Web Application Development

To whom it may concern,

I hereby certify, in my capacity as CEO and founder of **AIXA Inteligencia Artificial S.L.**, that **Mr. David Duque** completed his on-the-job training (FCT) placement at this company between **March and June 2026**, as part of the Higher National Diploma in Web Application Development at the **School of Art of Granada** (Spain).

AIXA Inteligencia Artificial S.L. is a Spanish deep-tech company based in Granada, specialising in artificial intelligence, data engineering and digital twins applied to the agri-food sector. It develops **Olearia**, a vertical platform for the olive oil value chain, and is part of the innovation ecosystem supported by the Provincial Council of Granada, Wayra (Telefónica), the University of Granada and Andalucía Agrotech DIH, with research collaborations with the University of Córdoba.

During his placement, David joined the development team and worked in pair with another intern. He took on a **full-stack role with a primary focus on backend**, contributing to two of the company's active projects:

PRODUCT · OLEARIA

Olearia Sign

Platform for the signing of **international contracts** in the olive oil sector. Contribution to FastAPI-based services, PostgreSQL data modelling and blockchain integration for on-chain signature verification.

R&D PROJECT

Atlas

Digital twin of the city of Granada. Navigable three-dimensional representation with real-time data layers. Development of ingestion pipelines, persistence layer and API services feeding the frontend.

Throughout the placement he worked with a modern, demanding technology stack — **FastAPI, PostgreSQL, blockchain, data lake architectures, React and 3D visualisation** — consistent with the current state of the art in web application development. The methodological approach we applied was deliberate: providing him with the tools to face real engineering problems, while requiring that he understand each problem in depth before applying a technical solution. The *what* and the *why* first, and only then the *how*.

David has shown **autonomy, responsibility, the ability to work in a team and a serious commitment** to his training. He stood out particularly for his structural rigour: he approaches problems from the foundations — data modelling, service contracts, robustness of the persistence layer — before moving to implementation. This depth, uncommon in an intern, justified extending both his autonomy and the scope of his responsibilities over the course of the placement.

For all the above reasons, **I recommend David Duque without reservation** for junior full-stack or backend development positions, as well as for continuing his academic and professional development.

I remain at the disposal of any organisation that may wish to further verify this reference.

Adrián Martínez

CEO & Founder · AIXA Inteligencia Artificial S.L.
