PROFESSIONAL PROFILE

Full-Stack Developer with a background in Web and Cross-Platform Application Development, specialised in Symfony/PHP and React. Designed and built a multi-tenant SaaS academic management platform and a native Android app with integrated AI from scratch. Professional experience in backend development with Java/Jakarta EE, LLM integration and relational databases. C1 English.

FEATURED PROJECTS

Full technical detail, screenshots and demo video at memnochdavid.github.io/#/projects

Loggex Machina — Academic Management SaaS Platform

Capstone · DAW 2026

Loggex Machina

Multi-tenant SaaS platform for school management: enrolment, timetabling, attendance, assignments, grading and real-time messaging.

- ▶ Designed and built a multi-tenant SaaS platform with 37 domain entities.
- ▶ Implemented a custom scheduling engine for academic timetable resolution.
- ▶ Built real-time messaging and notifications with Mercure (SSE).
- ▶ Integrated the official BOE catalogue: 230 programmes and ~2,230 subjects.
- ▶ Implemented asynchronous job processing with Redis queues.
- ▶ Deployed the platform with Docker and S3-compatible document storage (MinIO).

Symfony 8 API Platform React 19 PHP 8.4 Docker MariaDB

Project Dexter — Android Pokédex with AI

Capstone · DAM 2025

Project Dexter

Native Android Pokédex powered by PokéAPI v2 with Spanish descriptions via WikiDex scraping.

- ▶ Built a native Android app with Kotlin and Jetpack Compose (Material 3).
- ▶ Integrated PokéAPI v2 for a catalogue of ~1,000 Pokémon across 9 generations (I-IX).
- ▶ Implemented Pokémon identification via camera using Google Gemini Vision (AI).
- ▶ Implemented local persistence with Room and REST API consumption with Retrofit.
- ▶ Built WikiDex scraping for localised Spanish descriptions.
- ▶ Extended the catalogue with ~900 moves and ~1,000 items, using 3-level caching.
